Проблемы раннего материнства

ГБОУ ВПО Саратовский ГМУ им. В.И. Разумовского Минздрава России, медицинский лицей

Научный руководитель: Айрапетян М.М.

Early pregnancy is one of the main problems of modern teenagers. Teenage pregnancy - a condition of pregnancy in underage teenage girls (usually aged 13-19)

In the developed countries the majority of teenage pregnancies are unplanned and as a result in 70% of cases come to an end with abortions, 15% — natural abortions and only 15% are the share of childbirth. Why in our information century there is a problem of early pregnancy? Many teenagers today do not know how big responsibility to raise a child when they are young too.

Some teenagers who get pregnant early may experience anxiety, depression and other emotional problem. We know that teenager's ages of 15-19 are still young so emotion and other feelings of being teenagers might occur.

Some of the causes of early pregnancy among teenagers are lack of education especially sexual education, poverty, undergraduate, or problem with their family.

In some situations of the girl of teenage age can be not able to refuse the sexual relations. The sexual violence is widespread and especially affects girls of teenage age.

Pregnant girls of teenage age with bigger probability transfer unsafe abortion. By estimates annually in the world 3 million unsafe abortions among girls at the age of 15-19 years are made. Unsafe abortions make the significant contribution to long problems with health and in maternal mortality.

I think that sexual education should be learned in school. To aware the teenagers from the effect that may occur. They should be educated with this kind of problem, especially those teenagers who are already sexually active.

Key words: pregnancy, teenagers
